## Preface

Indonesian Journal of Cancer Chemoprevention (IJCC) is an Indonesian leading journal in cancer chemoprevention with international level. We publish all aspects of cancer chemoprevention, including experimental and clinical pharmacology, cancer detections and also applications of stem cell technology, immunology research, *in vitro* and *in silico* exploration on chemoprevention mechanisms, screening of natural (plants, marine natural products, etc.) and synthetic chemopreventive agents, cultivation of chemopreventive plants and development of herbal dosage forms for chemoprevention, and development of herbal cosmetics formulation. The current issue contains six articles with various topics.

Most of the articles explored anticancer potency of plants compound. Misgiati *et al.* reported that Jamur Dewa (*Agaricus blazei* Murill) has anti-breast cancer potency. Suhendi *et al.* studied the cytotoxicity activity and acetoxycinnamic acid (ACA) concentration of *Alpinia galangal* extract. Husnaa *et al.* proved that ethyl acetate fraction of *Caesalpinia sappan* L. enhancing cisplatin's cytotoxicity, so that is potential to be developed as co-chemotherapeutic agent. Another study of plant's compound as the source of chemoprevention is comparison of antimetastatic activity between *Nerium indicum* and *Cinnamomum burmannii*, a study by Lestari *et al.* In this issue also published other interesting topics. Amalina *et al.* investigated the impact of doxorubicin towards lamellipodia formation and cell migration, and Lestari *et al.* evaluated the genotoxicity of three food additives under *in vitro* Micronucleus Flow Cytometry Assay.

We wish to thank the authors contributed in this issue. Editors encourage other researchers to explore more combination chemotherapy agent and molecular mechanisms, and published the articles in IJCC.

Sincerely,

Dr. Arry Yanuar, M.Si., Apt.
